

M2100 Emergency Controller

UNINTERRUPTED POWER SUPPLY WITH AN AUTOMATIC INTELLIGENT EMERGENCY CONTROLLER

The M2100 Emergency Controller is designed to take care of the complete control of an emergency generator.

- An emergency generator controller - providing complete control of an emergency diesel generator set.
- In case of loss of normal supply the unit will automatically be activated via an external voltage relay.
- The unit has 16 inputs for start/stop, crank disconnect, low oil pressure, alarms and other parameters.
- The unit has 11 outputs for connection to external relays and other control equipment.
- Indicates - on the front - all necessary information about the conditions of the emergency generator.
- A compact unit for easy front panel mounting.

WELL PROVEN DESIGN

EASY TO USE

RELIABLE AND SAFE

Part no. M2100.0020

WHY CHOOSE M2100

- **The M2100 Emergency controller works automatically.** It will start and stop the emergency generator according to the “delay” and “return-to-normal” periods which you have chosen.
- **You get the full picture.** All necessary information about the conditions of the emergency generator are displayed on front panel.
- The unit is easy programmable and easy to use. **No specialist skills required.**
- **A quality product with focus on reliability and safety.** The product includes several safety functions in order to protect both the engines and the emergency generators.
