

## TECHNICAL NOTE NO. 09

2002-06-19

### M3000 watch-dog function

The M3000 include both a software and hardware watch-dog. In order to make use of this function set the General Constant "Alarm Out Inverted" to "ON" in the M3092 Programmer. The "ALOUT" (Output 15) will now be activated as long as no alarm is present and everything is normal. If an alarm is present this output will deactivate. If there is a malfunction hardware-wise or software-wise the watch-dog will also deactivate the output. Furthermore, it will of course also deactivate if the supply is lost.
